## FROM THE DESK OF PRESIDENT

**S. Balbir Singh Chhabra**  
President, GGSF

Guru Govind Singh foundation is nurturing young minds for the past 42 years with belief that "Education is a key to success". It has grown apace over the years and is doing exceedingly well in education. The newsletter is a good way to learn about developments and activities and let others know. I congratulate the editorial board, advisory board and the departments for publication of Newsletter. I hope everyone would be benefited with it.

**S. Balbir Singh Chhabra, President, GGSF**

## FROM THE DESK OF SECRETARY

**S. Kuljeet Singh Birdi**  
Secretary, GGSF

Guru Gobind Singh Polytechnic strives to impart the best knowledge for promoting & pursuing engineering competency in the most disciplined manner. This newsletter will bring out the achievements of our budding researchers and engineers. I congratulate all the people who have been associated with this publication.

**S. Kuljeet Singh Birdi, Secretary, GGSF**

## FROM THE DESK OF PRINCIPAL

**Prof. S. R. Upasani**  
Principal, GGSP

We at GGSP work with the belief that 'Education is core competency'. In the world governed by technology, the students must be equipped with the skills required to face the challenges of real-world situations. Our focus is on imparting holistic Education. We want to develop students with talent and expertise that will participate in engineering excellence and national development. This issue addresses, departmental activities, faculty achievements, extracurricular activities, student achievements and new technologies that came into existence. I really appreciate the efforts done by the editorial board, advisory board and the departments for publication of Newsletter.

**Welcome to GGSP & wish you a very bright future.**

**TECH TALK- FROM THE DESK OF FACULTY****THE EVOLUTION OF ROBOTICS**

The 21st century has seen a proliferation of robots in all fields. The most notable use of robotics is manufacturing, where they have been used to automate tasks that were once done by humans. They can be programmed to perform repetitive tasks such as welding and painting cars, assembling electronics or packaging products on assembly lines. They also help with quality control by checking for defects before the product leaves the factory floor.

Robots have also made their way into healthcare settings such as hospitals and nursing homes where they assist doctors with diagnostics tests like X-rays or MRI scans by holding patients still while images are taken (this is especially helpful for patients who are unable to hold still). They also improve patient safety by preventing accidents caused by human error during surgery—for example if a surgeon accidentally cuts through an artery instead of ligaments during an operation because he/she wasn't paying attention for just one second! This type of mistake could easily happen when performing delicate procedures like brain surgery but now thanks to robotic assistance there less chance that it will happen again...unless someone else makes another mistake! Another area where robotics has had great success lately involves agriculture: farmers around world have begun using drones equipped with sensors which allow them collect data about crops health status without needing anyone present at site itself."

**ARTICLE WRITTEN BY:****PROF. SWAPNIL V. KASAR, LECTURER, ME, DEPARTMENT****TECH TALK- STUDENT CORNER****THE RISE OF ROBOTICS AND AI**

The next major step in the evolution of robotics was the introduction of artificial intelligence (AI). AI refers to a computer's ability to learn and make decisions based on its own programming. The rise of AI (Artificial Intelligence) and robotics has been one of the biggest technological advances of the modern era. AI refers to a computer's ability to learn and make decisions based on its own programming. Robotics, on the other hand, is the branch of technology that deals with the design, construction, and operation of robots. One of the major drivers of the rise of AI and robotics has been the need for automation. Automation refers to the use of technology to perform tasks that would otherwise be done by humans. This has been driven by the need to improve efficiency, reduce costs and increase productivity. In many industries, robots and AI have replaced human workers in performing repetitive or dangerous tasks. This has led to increased efficiency and reduced costs for businesses.

Another factor driving the rise of AI and robotics is the increasing demand for personalized products and services. With the help of AI, companies are now able to analyze large amounts of data to identify patterns and trends, and then use that information to offer personalized products and services to customers. This has led to increased customer satisfaction and loyalty.
