S. Balbir Singh Chhabra, President, GGSF

FROM THE DESK OF SECRETARY

S. Kuljeet Singh Birdi
Secretary, GGSF

Guru Gobind Singh Polytechnic strives to impart the best knowledge for promoting & pursuing engineering competency in the most disciplined manner. This newsletter will bring out the achievements of our budding researchers and engineers. I congratulate all the people who have been associated with this publication.

S. Kuljeet Singh Birdi, Secretary, GGSF

FROM THE DESK OF PRINCIPAL

Prof. S. R. Upasani
Principal, GGSP

We at GGSP work with the belief that 'Education is core competency'. In the world governed by technology, the students must be equipped with the skills required to face the challenges of real-world situations. Our focus is on imparting holistic Education. We want to develop students with talent and expertise that will participate in engineering excellence and national development. This issue addresses, departmental activities, faculty achievements, extracurricular activities, student achievements and new technologies that came into existence. I really appreciate the efforts done by the editorial board, advisory board and the departments for publication of Newsletter.

Welcome to GGSP & wish you a very bright future.

TECH TALK- FROM THE DESK OF FACULTY

THE WORLD OF ROBOTS

Robots are increasingly being used in the medical field to help surgeons perform delicate operations and to assist in rehabilitation therapies. One type of robot that is becoming increasingly popular is the surgical robot. These robots are controlled by a surgeon who sits at a console and views a 3D image of the patient's body. The surgeon can then direct the robot's arms to perform the surgery. Surgical robots are becoming increasingly popular because they allow for more precise surgery and can be used in difficult-to-reach areas of the body. They also reduce the risk of infection and can shorten hospital stays. Rehabilitation robots are also being used more frequently to help patients recover from injuries and illnesses. These robots can provide physical therapy and help patients to regain movement and strength. Robots are also being developed that can be used to help care for patients in hospitals and nursing homes. These robots can help with tasks such as lifting patients out of bed and providing them with meals. The use of robots in the medical field is expected to continue to grow in the coming years. This growth will be driven by the increasing demand for more precise and less invasive surgeries, the need for more effective rehabilitation therapies, and the desire to reduce the cost of healthcare.

TECH TALK- STUDENT CORNER

NRW – THE GLOBAL ENGINE OF MOBILITY TRANSFORMATION

For many people, electric cars are becoming an increasingly large part of their mobility. Awareness of climate protection and electromobility is growing, and the number of new registrations in Europe continues to rise. A large number of innovations from NRW are also contributing to this development: For example, the long-standing company Mennekes in the Sauerland region has played a major role in shaping the European charging infrastructure. There is now no e-car charging station in Europe without the CEE three-phase plug from Mennekes.

The state owes its special role in the automotive industry and therefore also as an electromobility state to its extraordinary density and diversity of innovative companies, especially in the supplier segment, the large number of qualified employees, a dynamic startup scene and excellent business-oriented research landscape.

In addition, the state actively promotes the development of electromobility. Thanks to extensive programs, forward-looking projects receive the funding they need. This enables business, science and politics to work closely together on new mobility solutions.
